Manual Handling Training for the NDIS Sector

plena
Healthcare

What is Manual Handling?

Manual handling involves the physical effort required to move, lift, carry, push, pull, or reposition objects or people.

In the care sector, this often includes transferring individuals in and out of bed, chairs, between locations or to access the community. Effective manual handling is vital to ensure the safety and dignity of participants and the wellbeing of carers.

Why is Manual Handling Training essential?

For those working in the NDIS sector, safe manual handling is critical for:

Preventing Injuries

Reducing the risk of musculoskeletal injuries, the most common workplace injuries in care.

Participant Safety

Ensuring participants are moved with dignity and comfort, especially individuals with high or complex needs.

Regulatory Compliance

Meeting NDIS standards for safe, personalised care - certified annually.

Staff Confidence

Empowering carers with the skills and knowledge to handle tasks safely and identify risks effectively.

Importance in care settings

Safe manual handling practices are essential for preventing injuries and ensuring that both care recipients and care staff are protected.

In care settings, support staff and general caregivers routinely conduct tasks involving lifting, transferring, and repositioning individuals—activities that, if conducted incorrectly, can result in considerable physical strain or injury to both the participant and the assistant.

Providing all types of carers with effective manual handling skills, helps minimise the risk of musculoskeletal injuries, which are among the most common in the care sector. It also ensures participants are moved safely and with dignity, enhancing their comfort and quality of care. For those supporting individuals with complex or high needs, such as NDIS participants, manual handling training is essential to meet safety regulations and personalised care standards, making it a cornerstone of respectful, effective, and safe caregiving.

Manual handling training gives your staff confidence in using the correct techniques and equipment for each task, ensuring safety.

Empower your team with Plena Healthcare

Haven't completed your annual manual handling training? Experiencing incidents or concerns with care recipients or staff in the Home Care and Disability sectors?

At Plena Healthcare offer group-based, hands-on, face-to-face training with both competency-based and practical demonstration variations tailored for clinical and non-clinical attendees. We help enhance safety, address challenges, and ensure compliance with Home Care and NDIS standards.
